

Create a web form for a job application that includes the following fields and features:

1. Name
2. Gender
3. Contact Number
4. Email ID
5. Address
6. Area
7. City
8. State
9. Job Title (dropdown menu)
10. Educational Qualification
11. Attachment File to Upload Resume
12. Option to Capture a Photo
13. Option to Upload a Photo
14. Preview Section
15. Edit and Submit Buttons

Additionally, the submitted data should be securely stored in a backend database. Please outline the steps you would take to accomplish this task, considering both the frontend and backend aspects. Highlight the technologies, languages, and frameworks you would use, and explain any security measures you would implement to safeguard the collected information.

Good Luck!
